

### 1. Search Criteria:

- Users should be able to search for recipes based on their title, ingredients, or category.
- The search functionality should support partial matches and wildcard queries to improve user experience.

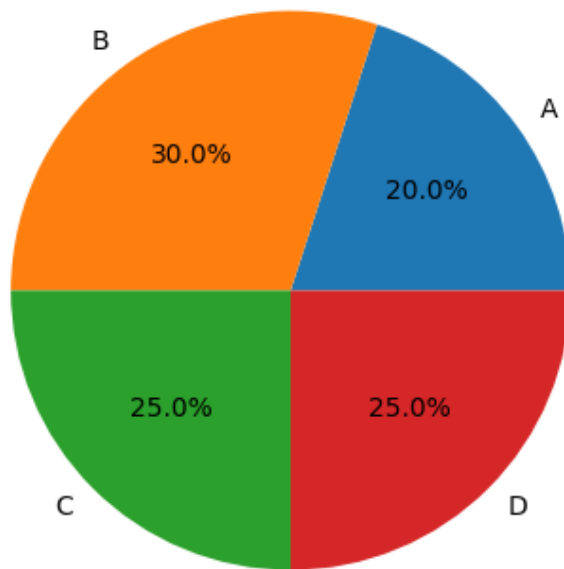

### 2. Format of Output:

- The search results should be displayed in a structured format, such as a table or list.
- Each search result should include relevant information about the recipe, such as title, image, description, and cooking time.
- The output should be visually appealing and easy to navigate
